The Guáquira river basin includes agro-productive savannas, humid tropical forest in its lower areas and cloud forest towards the highest heights and crests of Zapatero hill (1.450 masl)^[1] and there is a protection figure, the Protective Zone Macizo de Nirgua^[2], in addition to the almost total overlap with the hacienda Guáquira, a property that promotes some conservation efforts. It covers about 40 km² and is located at coordinates UTM 19P 537707 1138339 in the nearness of the populated centers of La Marroquina, Charaguao and Aguacatal, circumscribed in the San Felipe municipality of Yaracuy state.

This fieldguide is part of the project Ecology and current conservation status of Strigiformes of hacienda Guáquira, San Felipe, Yaracuy state, Venezuela^[3], carried out between 2017-2018. During the execution of the project, five species of Strigiformes were recorded: Tropical Screech-Owl (*Megascops choliba*), Vermiculated Screech-Owl (*M. noronhaiensis*), Mottled Owl (*Ciccaba virgata*), Black-and-white Owl (*C. nigrolineata*) and the Spectacled Owl (*Pulsatrix perspicillata*). Subsequently, the record of the Ferruginous Pygmy-Owl (*Glaucidium brasilianum*) and Barn Owl (*Tyto alba*) has been added.
